PROFESSIONAL SUMMARY

Final-year Information Science & Engineering student (CGPA 9.79) and Forward Deployed Engineer intern who gathers requirements directly from clients and delivers working websites and web applications. Built a live e-commerce platform for a freelance client, an AI marketing automation backend, and a blockchain-based supply chain platform, using a spec-driven workflow with human review of all AI-assisted output.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML/CSS
Web & Backend: React, TanStack Start, Tailwind CSS, Node.js, FastAPI, REST APIs, JWT authentication, role-based access control
Data & Cloud: Firebase (Firestore, Cloud Functions, Storage, Hosting), PostgreSQL, Docker, Google Cloud Run
AI & Tools: Google ADK, Gemini API, multi-agent workflows, prompt design, Model Context Protocol (MCP), Razorpay, Git/GitHub

EXPERIENCE

Forward Deployed Engineer (Intern) | *Subhanu Technologies & Solutions Pvt Ltd* July 2026 - Present

- Work directly with clients to gather requirements, turn them into specifications and scoped tasks, and deliver websites and web applications.
- Built CampaignOS, an AI marketing automation backend for the company's brand websites; review and test all AI-generated code before delivery.

Freelance Full-Stack Developer | *Self-employed* Jan 2026 - Present

- Built and launched Coorg Coffee Crafted for a client; it is live and already receiving orders. Currently building a website for a second client (KT Villas).
- Handle requirements, design, development, payments integration, deployment and client communication end to end.

Software Engineering Intern | *Bosch, Bidadi Plant* June - July 2025

- Worked on Generative AI applications in manufacturing and analyzed KPIs to support Overall Equipment Effectiveness (OEE) improvements.

PROJECTS

Coorg Coffee Crafted - Client E-Commerce Platform (Live) | *React, TypeScript, TanStack Start, Firebase, Razorpay*

- Built a server-rendered storefront with type-safe routing and a Firestore catalogue with multi-variant products (weight, price, stock).
- Integrated Razorpay with server-side HMAC-SHA256 signature verification so payment status and pricing are never trusted from the browser.
- Built an admin dashboard for orders, inventory, review moderation, analytics and DTDC shipping; automated order emails, SMS and alerts with Cloud Functions.

CampaignOS - AI Marketing Orchestration Backend | *Python, FastAPI, Google ADK, Gemini API, Firestore, Docker*

- Built a multi-agent backend that turns content calendars (Word, Excel, PDF, CSV, images) into poster, video and SEO blog campaigns, reading image schedules with Gemini Vision.
- Combined AI artwork with deterministic rendering so logos, text and QR codes are placed accurately; added a human approval step before anything is published.
- Implemented an MCP server with JWT-based permissions so external AI clients can publish blogs to multiple websites; deployed on Google Cloud Run.

VeriFarm - Blockchain Agricultural Supply Chain Platform | *Hyperledger Fabric, Node.js, PostgreSQL, FastAPI*

- Designed a platform that traces crops from farm to consumer, enforcing Minimum Support Price rules through smart contracts on a permissioned blockchain.
- Built an anomaly detection service in FastAPI to flag suspicious quantities and duplicate identities; stored only hashed farmer identity data for privacy.

EDUCATION

B.E., Information Science & Engineering | *B.N.M. Institute of Technology* | *CGPA: 9.79* Sep 2023 - 2027

PUC, Government PU College, Madikeri | 97.3% 2022 - 2023

SSLC, St. Joseph's Convent Composite High School, Madikeri | 96.48% 2019 - 2020

ACHIEVEMENTS

- Smart India Hackathon (SIH) 2025 Winner
- Adhvaya 2.0 National Level Hackathon Winner
- Vision90 Ideathon Winner

LANGUAGES

- Languages: Kannada, English, Hindi (read, write, speak)
